 **THORN EMI Lighting**

AIRFIELD LIGHTING

THORN EMI Lighting offers a comprehensive range of lighting equipment for all categories of airfield lighting. The range complies with ICAO recommendations and is easy to maintain, in particular the servicing time on active parts of the airfield has been considerably reduced. This is a direct result of the development by THORN EMI of lamps and luminaires in conjunction with each other.

This method of development has led to THORN EMI airfield lighting equipment being installed in installations from small helipads to large international airports all over the world. As well as the examples of visual guidance light fittings shown here, the Division also supplies the related equipment needed to operate these specialised systems e.g. constant current regulators, control desks, transformers, obstruction lights and lamps.

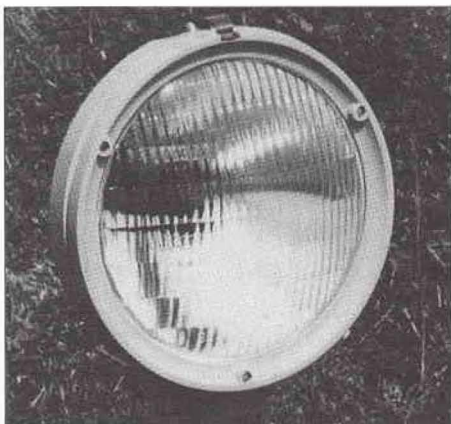

CRH-C2

Bidirectional runway centre line luminaire. One of the inset range of approach, runway (centre line and edge) and taxiway luminaires.

PRECISION APPROACH PATH INDICATOR

HIGH INTENSITY UNIDIRECTIONAL APPROACH LIGHT
