

G.E.C.

LIGHTING FOR HOSPITALS

The G.E.C. Shadowless Operating Theatre Unit illustrated is an example of the G.E.C. equipment evolved to meet the special requirements of hospitals and nursing homes.

This unit provides high lighting intensity with a minimum of heat; freedom from shadow and glare; true colour rendering; provision against lighting failure; and a very wide

margin of safety in the suspension equipment.

A number of important hospitals and nursing institutions have proved the value of this fitting.

Designed and manufactured entirely in England by the G.E.C., whose unrivalled resources and experience in the field of electrical development are always available to architects.

The G.E.C. at all times welcomes requests for consultations on any problem regarding electrical equipment for hospitals
